

Department of Marketing and Distribution Management

Our goal is to cultivate and nourish both humane and professional talents in Marketing and Distribution Management. This program is designed to integrate humane essences with the emphasis on sincerity, integrity, faith and honesty.

We offer a four-year program leading to the degree of Bachelor of Business Administration. A student must complete a minimum of 128 credit units, of which 70 are obligatory. In addition to coursework in various areas of marketing, the students will be acquainted with basic business concepts and practices. The first-year courses include general coursework in social and human sciences. Guidance courses, such as Marketing Management, Distribution Management, Fundamentals of Accounting, and Business Law, are introduced during the second year of study. In the third and fourth years of study, we offer specialized courses, including Consumer Behavior, Market Survey, Customer Relationship Management, Retail-Service Management, Supply Chain Management, and Case Study.

TED^x TCUST

Department of Information Technology and Management

Virtual Reality

The aim of the Department of Information Technology and Management is to cultivate the development of highly skilled professionals who are ethical, innovative, and practical-minded. The curriculum is designed to provide students with both theoretical and practical expertise.

With a multi-dimensional development concept, the DITM sets up "Multimedia Design" and "Cloud Applications" modules, including App development, cloud applications, big data, interactive multimedia, VR, AR and "new media". We also encourage our students to pursue a second specialty in information technology, and aid them in the development of their professional ethics and teamwork skills with the support of other Tzu Chi affiliates. This combination of skills and training make our students highly competitive in the current job market.

After graduation, students can work in the industries of interactive multimedia design, VR, AR, user experience design, UAV applications, APP development, cloud network and medical care fields.

Department of Health Administration

Like all businesses, the health care-related businesses need excellent management and leadership to be successful. As a Health Care Administrator, you may manage a single department or an entire health care facility. To facilitate clinical professional services and make effective decisions, health care administrators must understand basic business principles, and demonstrate strong leadership.

Entry-level professionals may be responsible for establishing and implementing the policies and objectives of a specific clinical area or department within a facility. They may be required to train and evaluate personnel, develop reports and budgets, and coordinate activities with other managers. With experience and an advanced degree, health care administrators may move into executive management positions in which they are responsible for facilities and equipment valued in the millions of dollars, as well as hundreds of employees.

Student Internship in the Medical Records office

College of Health Technology and Management

Student clubs event

The College of Health Technology and Management was established on August 1st 2015. The college aims to nurture vocational undergraduate students for becoming interdisciplinary, managerial and administrative personnel equipped with ethical and earnest traits and global visions. To achieve educational objectives, cultivating students with specialized skills and multidisciplinary knowledge as well, the college provides students with academic systems and recourses for professional learning, practical training, and international student exchange programs. Importantly, becoming π -shaped professionals, the students can demonstrate excellent morality emphasized by enterprises and institutions through Chi-Tzu humanistic education.

To achieve expected perspectives, the college proposes following executive policies,

- Generalize Chi Tzu humanistic education.
- Actuate and operate the interdisciplinary programs and learning families.
- Implement the counseling program of professional certification.
- Reinforce international exchange and overseas internship programs.
- Create research platforms for industry-college collaboration projects.
- Encourage diversified and specialized curriculum design and teacher practical ability.

The college includes Health Administration and Management Department, Information Technology and Management Department, and Marketing and Distribution Management Department.

Department of Medical Imaging and Radiological Sciences

The applied medical radiation sciences encompass a variety of disciplines, including radiological technology, radiation therapy and nuclear medicine technology. Because the world of medical radiation science is evolving vibrantly, there is a strong need for quality education and research in radiological sciences and protection.

The Department of Radiological Technology and the Institute of Radiological Science maintain a strong commitment to new medical imaging technologies. We provide innovative programs blending an interdisciplinary core curriculum and ongoing clinical experience in radiological sciences. The 4-year bachelor's program in the Department of Radiological Technology Should prepare undergraduate students to apply for certification through the Taiwanese Registry of Radiological Technologists, since this certification is necessary for radiology technician working in hospitals, clinics and medical laboratories. Following degree completion, students are also eligible to write the registry exam of radiation protection technologists and the physicists.

Workplace experience

Department of Nursing

Nursing skill

The Department of Nursing was founded in 1989, and offers different curriculums of nursing education, which comprise: the Five-Year Junior College of Nursing, the Two-Year Senior College of Nursing and the Four-Year Program for Bachelor of Nursing. The Five-Year Junior College of Nursing students receive training in the fundamental nursing care skills that required for all nursing professionals, and are eligible to take the national RN licensing exam upon graduation. The Two-Year Senior College of Nursing program is designed for students with training in the Five-Year Junior College of Nursing program, who desire to undertake an advanced nursing education to obtain a bachelor of nursing degree. We recruit students from both general and vocational high schools for the Four-Year Program and provide four-year bachelor of nursing program. The Bachelor of Science in Nursing program emphasizes critical thinking and evidence-based nursing practices. Our overall goal is to prepare students to be humanity-oriented nursing professionals who integrate a spirit of loving-kindness, compassion, sympathetic joy, and equanimity in their nursing practices.

College of Nursing / Institute of Long-Term Care

Long-term care institution - care old men

The College of Nursing of Tzu Chi University of Science and Technology was established in August 1, 2015, comprising a Two-year and Four-year College of Nursing and Five-year Division. In August 2016, the Nursing College also contains Department of Medical Imaging and Radiological Sciences and Institute of Radiological Sciences.

Design of each module focuses on professional training of care on different stages of life development with human-oriented foundation. From being pre-disease status, high risk group, diagnosed disease to after-disease status, we not only emphasize cure of disease, but also highly address health promotion, disease prevention and rehabilitation.

Division and Department of Nursing trains students to be manpower in hospital, community and long-term care institutions. Department of Medical Imaging and Radiological Sciences and Institute of Radiological Sciences provide fundamental and advanced personnel in both hospitals and related institutions. Long-Term Care Institute provides professional training for students to be expert and researcher.

About Our University

Tzu Chi University of Science and Technology was established by the Tzu Chi Buddhist Compassion Relief Foundation in 1989 under the guidance of Dharma Master Cheng Yen. The foundation promotes four major missions : Charity, Medical Care, Education, and Humanity. The college currently admits graduates from junior high and senior high schools with no religious restrictions.

Vision

Our school's vision is “ Professionalism, cultural values, service, and excellence.”
